

hardWALL

INDUSTRIAL HARDWOOD LINING

hardWALL is a natural timber wall lining that offers a very unique industrial look that will transform the identity of a space, creating a raw modern atmosphere.

Including only the most individual naturally occurring and manmade features, hardWALL is a high feature product that complements any interior bringing a brutal rustic look and feel.

Each feature represents a period of time that the forest has gone through, whether it is the dense tight grain caused by drought, or dark rouged gum veins caused by scorching wildfires, these features are a chronicle of the history of hardWALL.

Environmental Credentials...

Hurfords is committed to our forests, our community and our future. Underpinning our commitment is an ambitious hardwood reforestation project in our local surrounding area where we have purchased over 5000 hectares of land and have commenced a planting program that will see more than 25000 new plantation eucalypt saplings established each year. Hurfords source a proportion of timber from private native forests with the balance procured from NSW State Forestry which is certified under the Australian Forestry Standards Chain of Custody. (AS4707 – 2006).
